

Downtown rock walk bingo

People have built with stone for many thousands of years. Pyramids, pueblos, cathedrals and coliseums were all formed from the rocks of the region. Walking through any city or town can be a lesson in geology, as you spot examples of different types of rock and their uses.

Clay 	Obsidian 	Sculpture made from rock 
Sedimentary rock 	Conglomerate rock 	Igneous rock 
Sandstone 	Shaped by natural forces (ex. Hill formed by lava flow) 	Limestone 

These photos were taken in downtown Flagstaff, but similar examples can be in other areas and cities. How many can you find where you are?
